Research Technician

Job summary:
A full-time position for a research technician is immediately available in Division of Signaling and Gene Expression at the La Jolla Institute for Allergy and Immunology (San Diego). The successful candidate will join a team of scientists investigating the epigenetic regulation of immune cells in allergy and asthma. The research involves molecular biology, cell culture, flow cytometry, high-throughput next generation sequencing. Experience in any of the techniques mentioned above is a plus, however pertinent training will be provided. This position requires a 2-3 year commitment.

Essential Duties and Responsibilities:
The candidates will support active research and day-to-day operations of our research laboratory under the direct supervision of a senior post-doctoral scientist. We seek candidates who are diligent and extremely meticulous, who display initiative and will be able to contribute intellectually to the project.

Qualifications:
Minimum requirements for this position include: a bachelor's degree (BS/BA) in biology, biochemistry or related field, at least 1 year of lab experience in an academic or industrial setting and the ability to illustrate the conceptual significance of previous work/training experiences.

This is a great opportunity for a talented person to grow in a creative and stimulating work environment.

Interested applicants should send by email a resume (less than 2 pages, including contact information for 2 references) and a brief cover letter relating how their talents fulfill the criteria for this position to:
